CONTROL BOX WITH ANALOG DISPLAY

CONTROL BOX WITH ANALOG DISPLAY

CONTROL BOX WITH ANALOG DISPLAY

CBRN Analog Control Units are only used in positive pressure CBRN Systems. This CBRN control box is used to turn the entire CBRN filtration system on and off and to show the user with the analog indicator on the positive pressure in the vehicle. Thanks to the power and error indicators on the Analog Control box, it is checked whether the system is working properly or not. A pneumatic line integrated into the Analog Control boxes can calculate the positive pressure while opening to the atmosphere. It has the feature of warning the personnel by giving an alarm at the value set with the differential pressure switch and warning when the filter is not in place with the inductive sensor. CBRN Control Boxes have successfully passed high temperature, low temperature, high humidity, shock - vibration tests in accordance with MIL-SDT-810H standard.

FEATURES

Communication	:	Analogue Control Box
Communication	:	Dry Contact
Pressure indicator	:	Analog
Buzzer	:	Available
Fan Speed Adjustment	:	Single Stage
Warnings	:	Filter, Low Pressure
Manuel Test	:	Available
AEP54	:	Compatible

STANDARDS

MIL-SDT-810H
