REMOTE CONTROL BOX WITH DIGITAL DISPLAY

REMOTE CONTROL BOX WITH DIGITAL DISPLAY

MARS-DJ1

Mars CBRN digital display control unit provides full control and observation by controlling fan speed and filtering time. It provides the most suitable air to the crew by sending signals to air conditioning systems by automatically heating and cooling the air. With the internal heating unit, it heats the filtered air independently of the vehicle air conditioner and delivers it to the crew.

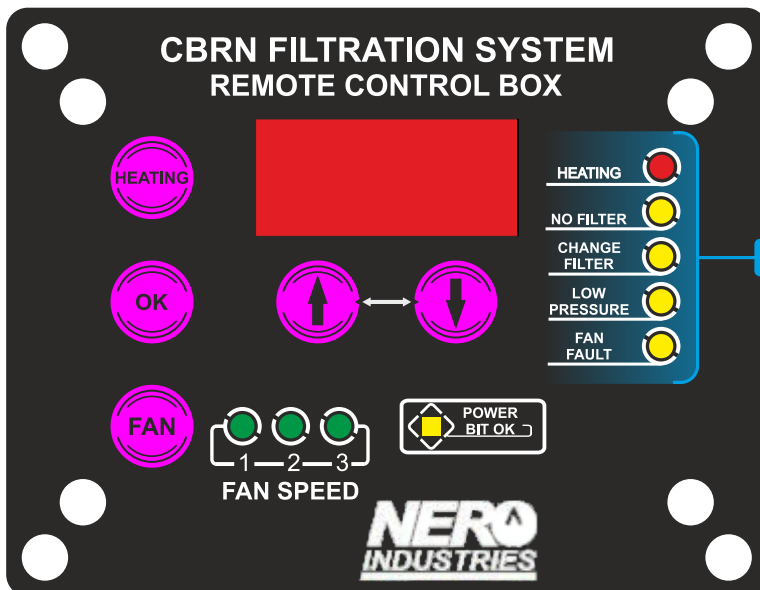

New features are added according to the customer's request and data can be provided via canbus.

Values such as pressure warning, temperature, filter pre-counter can be adjusted manually on the box.

Multiple units can be controlled with a single remote command.
